Suite A  
Tallahassee, Florida 32308

Randy,

Thank you for your inquiry regarding the use of SureGrip Daily Cleaner / Degreaser on finished flooring.

Traditional seals or finishes that are used on resilient tile, terrazzo and other types of hard floors have a cross link component that is susceptible to alkalinity. This characteristic is why most floor strippers are highly alkaline. The alkalinity of the stripper will attack and dissolve the cross link in the finish allowing the floors to 're-emulsify' and be stripped.

SureGrip Daily Cleaner / Degreaser is non-alkaline and will not attack the cross link component of finishes. In addition, the slight acidic nature of the product will neutralize and dissolve hard water content in the mopping solution which may otherwise dull or leave a haze on the floor.

In areas prone to have snowfall and where ice-melting compounds are used, SureGrip Daily Cleaner / Degreaser can be used to neutralize the harmful effects of the alkaline ice melting compounds insuring a better looking and longer lasting floor.

If you have any questions regarding the application and suitability of SureGrip Daily Cleaner / Degreaser on floor coatings or other surfaces, please do not hesitate to let me know.

Regards,
